

# WEBOUNCER

WEBOUNCER from KraLos is a Secure by Design security solution that automatically protects websites and web applications from cyberattacks—even new, previously unknown threats.

## INNOVATION BY KRALOS

The patented EP4430501 & US 12,547,776 technology uses a digital twin to ensure data integrity proactively, automatically, and tamper-proof.

## YOUR VALUE

- Protection against known and unknown attacks
- Round-the-clock security without manual monitoring
- Replaces many individual security solutions with one platform
- Reduces costs, complexity, and failure risks
- Your website remains stable, secure, and available

## WHO CAN USE WEBOUNCER?

- Companies of all sizes
- Operators of websites, online platforms, and web portals
- Organizations with high requirements for availability and trust
- No in-depth IT knowledge required.

## The problem

Web applications are now at the heart of every business—and at the same time, they are the biggest gateway for cyberattacks. Traditional security solutions often react too late, are complex, expensive, and require highly specialized IT personnel.

The result:

- Website and online service outages
- Data loss and damage to reputation
- High costs due to security incidents and tool chaos

## The solution

WEBOUNCER protects web applications proactively, not just reactively.

At its core, WEBOUNCER works with a digital twin of the web application:

- The system learns how the application behaves during normal operation.
- Any deviation is detected immediately
- Attacks are automatically repelled or neutralized
